The weighted histogram with a normalized frequency yields a visual similarity between the data sets. It is implemented by the R package "clustering" (version 1.3--11).\ 2. The DPCM (Discrete Phase--Color--Magnitude) transformation yields a normalized color histogram that is typically used for color quantization.\ 3. Among others, the BLI (Blue--Luma--Index) transformation yields a normalization of color. The last steps of the visualization procedure are to represent the similarity between the data sets (modalities) in the form of a gradient color scale, and to display the data sets (modalities) in a defined visualization environment ([Fig 5](#pone.0185730.g005){ref-type="fig"}). ![A visualization flowchart.\ a) The visualization procedure. b) Modality comparison in the visualization environment. c) Constrained segmentation in the visualization environment.](pone.0185730.g005){#pone.0185730.g005} Influence of the SNR on the ability to identify lesions {#sec011}

----- Most of the reviewed studies did not quantify the SNR. Some of the images were clearly under-exposed but no SNR was given. We estimated the SNR of the c6a93da74d
